DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

1- FIG. 1 is a block diagram showing a configuration of a digital camera in a first embodiment of this invention.

2-FIG. 7 is a block diagram showing a configuration of a digital camera in a second embodiment of this invention.

3-FIG. 20 is a block diagram showing a configuration of a digital camera in a third embodiment of this invention.

4-Fig. 53 to Fig. 71 are flow chart or view showing control processing

5- FIG. 72 is a block diagram showing a configuration of an image storage apparatus in a fifth embodiment of this invention.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the

Art Unit: 2609

limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: All species have different structure and functionalities. Furthermore, all species have separate utility.
